

Manipulation under Anesthesia for Chronic Pain

Policy Number: **M111121171**
Effective Date: **2/1/2012**
Sponsoring Department: **Health Care Services**
Impacted Department(s): **Health Care Services**

Type of Policy: ☒ Internal ☒ External

Data Classification: ☐ Confidential ☐ Restricted ☒ Public

Applies to (Line of Business):

- ☐ Corporate (All)
☒ State Products, if yes which plan(s): ☒ MediSource; ☒ MediSource Connect; ☒ Child Health Plus ☒ Essential Plan
☒ Medicare, if yes, which plan(s): ☒ MAPD; ☐ PDP; ☒ ISNP; ☒ CSNP
☒ Commercial, if yes, which type: ☒ Large Group; ☒ Small Group; ☒ Individual
☒ Self-Funded Services *(Refer to specific Summary Plan Descriptions (SPDs) to determine any pre-authorization or pre-certification requirements and coverage limitations. In the event of any conflict between this policy and the SPD of a Self-Funded Plan, the SPD shall supersede the policy.)*

Excluded Products within the Selected Lines of Business (LOB)

N/A

Applicable to Vendors? Yes ☐ No ☒

Purpose and Applicability:

To set forth the coverage policy for manipulation under anesthesia for chronic pain.

Policy:

Commercial, Self-Funded and Medicare Advantage:

Based upon the lack of peer-reviewed literature, manipulation under anesthesia for the treatment of chronic pain, in absence of a vertebral fracture or dislocation, has not been proven to be medically effective and is considered experimental.

This policy does not address manipulation under anesthesia for fractures, adhesive capsulitis, completely dislocated joints or fibrosis of a joint that may occur following total joint replacements.

MediSource, MediSource Connect, Child Health Plus and Essential Plan:

MediSource, MediSource Connect, Child Health Plus and Essential Plan cover manipulation of spine requiring anesthesia based on medical necessity review by the Medical Director.

Background:

Manipulation under anesthesia (MUA) is aimed at reducing pain and improving range of motion and is a treatment modality that consists of manipulation and stretching procedures performed while an individual receives anesthesia (e.g., conscious sedation, general anesthesia). A chiropractor, osteopathic physician or medical physician may perform this type of manipulation with an anesthesiologist in attendance.

This procedure has not been established as either safe or effective for the treatment of musculoskeletal disorders such as neck and back problems. Critical issues such as selection criteria, outcome assessments, and long-term benefits need to be addressed by well-designed studies before this procedure can be considered as an essential part of conservative therapy. There are currently no widely accepted guidelines on standards for chiropractic MUA. The 1993 Guidelines for Chiropractic Quality Assurance and Practice Parameters considered MUA “equivocal”, and these guidelines have not been updated since 1993. Evidence for the effectiveness of these protocols remains largely anecdotal, based on case series mimicking many other surgical and conservative approaches for the treatment of chronic pain syndromes of musculoskeletal origin.

An evaluation of the peer-reviewed scientific literature, including but not limited to subscription materials, has provided Independent Health the basis for its medical necessity coverage outlined above.

Pre-Authorization Required? Yes ☒ No ☐

Pre-authorization is required for this service.

Definitions

Manipulation under anesthesia (MUA) consists of a series of stretching, mobilization and traction procedures performed under anesthesia. MUA is performed by chiropractors, physical therapists, physicians or other health care providers who are licensed to perform the service. MUA is generally performed with an anesthesiologist in attendance.
